1.	Diagnosis	<p>Description: A 26-year-old obese woman with a history of bipolar disorder complains that her recent struggles with her weight and eating have caused her to feel depressed. She states that she has recently had difficulty sleeping and feels excessively anxious and agitated. She also states that she has had thoughts of suicide. She often finds herself fidgety and unable to sit still for extended periods of time. Her family tells her that she is increasingly irritable. Her current medications include lithium carbonate and zolpidem.</p> <p>Summary: 26-year-old obese woman with bipolar disorder, on zolpidem and lithium, with recent difficulty sleeping, agitation, suicidal ideation, and irritability.</p>	1087494 1434505 2031887
2.	Treatment	<p>Description: A 21-year-old female is evaluated for progressive arthralgias and malaise. On examination she is found to have alopecia, a rash mainly distributed on the bridge of her nose and her cheeks, a delicate non-palpable purpura on her calves, and swelling and tenderness of her wrists and ankles. Her lab shows normocytic anemia, thrombocytopenia, a 4/4 positive ANA and anti-dsDNA. Her urine is positive for protein and RBC casts.</p> <p>Summary: 21-year-old female with progressive arthralgias, fatigue, and butterfly-shaped facial rash. Labs are significant for positive ANA and anti-double-stranded DNA, as well as proteinuria and RBC casts.</p>	1065341 1459118 1526641
